Hiring Manager
Toronto, ON, Canada

Dear Hiring Manager,

I am writing to express my interest in a Junior Cybersecurity Analyst position at your organization. With hands-on experience in security operations at CSIS and a rigorous academic background in Computer Programming and Analysis at George Brown College, I bring a skill set that bridges real-world threat intelligence with technical software development expertise.

During my time at CSIS, I contributed to vulnerability assessments, system hardening initiatives, and penetration testing using tools including Kali Linux, Metasploit, and BurpSuite. Working alongside senior agents and engineers, I developed security-focused Python scripts that contributed to a 15% reduction in incident reports and supported system administration across both Linux and Windows environments. This experience gave me direct exposure to the standards and operational rigour expected in government-level security contexts.

Academically, I have developed proficiency in Python, Java, C#, and JavaScript, complemented by coursework in System Design and Analysis, Full Stack Web Development, Advanced Database Programming, and Data Structures and Algorithms. My capstone project **90Mins**, a full-stack football live score web application, further strengthened my ability to design and deliver secure, performant systems, working across the full development lifecycle from requirements through to production deployment.

I am drawn to opportunities where security is treated as a shared responsibility woven into every layer of the development process. I want to contribute to a team that values proactive defence, continuous learning, and building systems that are resilient from the ground up rather than patched after the fact.

I would welcome the opportunity to discuss how my background aligns with your team's needs. Thank you for your time and consideration.

Sincerely,

Jen Henry
